Summary

Simple low profile keycap, the same used on the Keychron K3 keyboard with low profile Gateron switches.

I designed this because I couldn't find any low-profile keycaps that would fit my Keychron K3.

Print on a resin printer to get the best quality.

I also added a version for filament printers with higher tolerances so it fits.

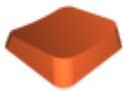

I sliced it in a funny way so the curvature on the top of the key prints fine and no supports are required for the middle part:
